Transversal competencies

Neverhack, founded in 1983 under the name Silicom, is a French company specialising in space telecommunications and cybersecurity.

In 2021, Silicom changed its name to Neverhack, reinforcing its position as a leader in Securecomm & Cybersecurity.

COMPETENCIES & CAPABILITIES

In the Space Area, NEVERHACK is supporting its customers in R&D, industrialization, MOC phases:

- Ground system engineering and Satcom systems
- RF, transmission, signal processing, radionavigation, link budget, traffic and resources management
- Infrastructures, network, Cybersecurity IT & OT
- System Simulation & performance
- Sector specific software: prototyping, development, integration and validation
- Scientific algorithms
- Pentest IT & OT

NEVERHACK

PRODUCTS & SERVICES

NEVERHACK modes of intervention are both technical assistance and work package, as prime contractor or within service centers.

Our local management and organization enable us to guarantee the success of projects either in-situ or ex-situ locations.

At the heart of our activities is an integrated approach: combining cybersecurity, software development and infrastructure to offer end-to-end solutions, from the design to the secure operation of systems.

Artificial intelligence and quantum cybersecurity play a key role in this approach, enhancing our ability to detect anomalous behaviour and anticipate tomorrow's threats. Our teams are able to test, simulate and guarantee the operational security of networks and infrastructures on a continuous basis.

MAJOR SPACE PROJECTS & REFERENCES

NEVERHACK has been working for many years with the main space industrial players (Airbus Defense & Space, Thales Alenia Space, CNES...), contributing for major space systems (satellites payload, ground segment, performance tools...).

YAHSAT, IRIDIUM, GALILEO, EGNOS, SYRACUSE, ARGOS, RIFAN, 4G are some of the projects NEVERHACK has been part of.
